

Tic Tac Toe Game

User Manual

The objective of the board game Tic Tac Toe is to have your designated symbol placed three in a row, either horizontally, vertically, or diagonally. Players take turns placing their symbol (x or o) on the 3x3 game board. The first person who has their symbol in three in a row is declared winner. If there are no winners, the game is considered a draw, and declared a cat's game. Users will need to input coordinates for our program, with the choices of the x-coordinate being a, b, or c, and the choices of the y-coordinate being 1, 2, or 3. For example, the user would input a1 if they want to place their symbol in the upper, left-hand box.

o wins!
